Countersunk Holes & Screws Supplied:

No Holes Drilled & No Fixings Supplied:

Ordering Information and Instructions:

It is important that we get your stair nosing order right so that your stairs are compliant and looking their best. For this reason, please read the following information carefully.

Our default price is per lineal metre (1000mm) without countersunk holes and screws. Add another \$1.50 + gst per lineal metre (1000mm) to have countersunk holes and screws included in your order. You will notice the tick box above price will automatically change if you choose this option.

How to work out what you need to order:

Measure and add all individual lengths required (in mm) and sum them up in mm. This is the total amount of lineal metres that you require. Round UP the measurements to the next lineal metre. (See Rounding Up Rule below) This is what you will be charged for.

EXAMPLE:

I have 10 stairs that I want to install stair nosing on. Each step is 850mm long.

$850\text{mm} \times 10 = 8500\text{mm} = 8.5$ lineal metres

As the stair nosing is sold per lineal metre I will be charged for 9 lineal metres as it is ALWAYS ROUNDED UP to the next metre.

Rounding Up Rule:

Once you have the total measurement you require then round up to the next meter. This is the quantity you will need to enter in the quantity field.

EXAMPLE:

If my total was between 8.1 and 8.4 lineal metres, the amount I would be charged for would be rounded up to 9 metres but I would still receive 8.4 metres. I will need to enter 9 Meters in the Quantity Box

If my total was between 8.5 and 9.0 metres, the amount I would be charged for would still be rounded up to 9 metres but I would still receive 8.4 metres. I will need to enter 9 Meters in the Quantity Box

This is the rounding up rule.

Countersunk Holes and Screws Options:

We leave it up to you to pick supply with OR without countersunk holes because some customers need to drill their own holes in allocated spaces that are only able to be determined once onsite, or some customers simply want to glue the stair nosing down which wouldn't require any holes drilled.

We drill countersunk holes for you and supply screws:

If you pick the option of us drilling holes for you, we will also supply you screws. However if you do pick this option, you will need to install the aluminium stair nosing first, fix it in place using screws, then peel off and stick down the anti-slip insert - so that the anti-slip insert will cover the fixings holes, and you end up with a nice finish. Please note this option means you will receive the aluminium stair nosing and the ant-slip insert as separate pieces.

No holes drilled no fixings supplied:

You will receive the product as one piece: aluminium strips cut to length, with no holes drills, and the anti-slip inserts also cut to length already stuck down onto aluminium. We suggest using Selleys Hold Up adhesive to fix stair nosings to stairs if you decide to go with this option.

Note: If you choose this option and want us to supply you the insert and aluminium stair nosing separately, you must indicate this in your order.
